OUR METHODS OF GROWING ROSES

We dust our plants regularly during the growing season with a 10-90 Copper-Sulphur Dust which is the latest method of controlling the fungi, mildew and black-spot. This dusting maintains the foliage through which all food elements are stored in the plants. Regular cultivation insures well-developed normal bushes.

HANDLING AND SHIPPING OF ROSES

Our methods of handling Roses in digging and shipping are as important as the growing of good Roses. We are careful at all times to prevent any drying out of the roots or tops and to see that our plants are properly dug, handled and packed for shipment.
